

Care & Cleaning

Countryside Cabinet Care & Cleaning Guide

As with any product constructed of wood, a few moments of care and using the steps below can go a long way in keeping your new Countryside Cabinets looking their best. A Countryside Cabinet has an oven cured UV catalyzed conversion varnish finish for long lasting durability and beauty.

We recommend the following processes should be done once or twice each year or when the product needs the attention:

- Step 1:** Wipe down product with a soft, damp cloth to remove dust and other particles then dry promptly with a second, clean soft cloth.
- Step 2:** It is important to remember to clean up all spills and excess moisture on the cabinets immediately.
- In order to remove a build-up of grease and dirt add a small amount of a dishwashing soap (ie Dawn) to a quart of warm water. Dampen a clean, soft cloth with this solution and wipe down the cabinetry. Use a second clean, soft cloth to remove any and all dampness. It is important to understand that wood and water do not mix.

We do not recommend the use of any type of furniture polish or cleaners. Avoid using abrasive cloths, brushes or pads to clean your cabinetry. These products can affect the appearance and durability of the top coat over time.

Thank you again for your purchase and support of Countryside Cabinets and please enjoy the beauty of the wood and the long lasting durability of the finish for years to come.
