See Our On-Line Catalog for Pricing.

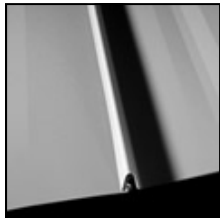

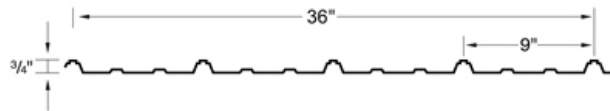

*Badger is now stocking **PANEL-LOC PLUS™** in 14', 16' & 22' lengths in a limited number of colors. We also stock a number of the most popular trims and colors. (See the following pages.)*

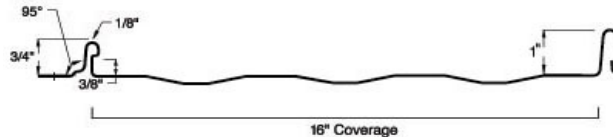

PANEL-LOC™ is a low rib (5/8") panel that is best used for post frame barns and buildings, as well as residential roofing. PANEL-LOC™ is available in 26 and 29 gauge steel.

PANEL-LOC PLUS™ is a low rib (3/4") panel which provides durable performance with an added striation on top of the rib that gives it even more strength. PANEL-LOC PLUS™ gives agricultural and light commercial projects, as well as residential roofs, the protection of steel with an attractive appearance.

HORIZON-LOC™ is a durable concealed fastener roof system with easy snap together installation. This architectural panel system uses minimal visible fasteners, giving your building a clean, attractive finish. The panel's easy snap-on ribs attach rapidly with no hand seaming, so installation is less expensive than traditional standing seam.

**HERITAGE® SHINGLES: Algae Resistant**

HERITAGE® shingles feature a double-layer fiberglass mat construction with a random-cut sawtooth design. The two layers of mat are coated with asphalt and then laminated together and surfaced with mineral granules. A self-sealing strip of asphalt helps provide wind resistance. Shadowtone granule blend adds extra richness and depth. Random-cut sawtooth design prevents unsightly zipper patterns. Extra-thick weather-resistant construction provides years of protection.
30 year limited warranty. U.L. Class A fire rated and U.L. wind related.

Classic Heritage® colors are time-honored favorites that create a traditional look.

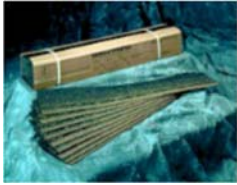

Heritage® America's Natural Colors® add a contemporary flair with dramatic and vibrant hues.

Heritage® Woodgate™ are designed with a wider cut that conveys a rugged yet refined wood-shake look. Unique color blend complements the expansive look and allows for more dramatic color distribution across the shingle. Enhanced shadow line further intensifies the rustic shake-like beauty.

ROOFING UNDERLAYMENTS**Priced Per Roll****TAMKO® TW Underlayment**

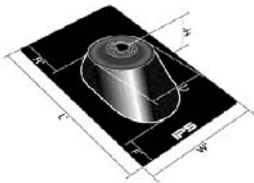

Is a flexible, self-adhering rubberized asphalt sheet membrane with a polymer film on the surface and a removable treated release film on the adhesive side. It is well suited for use as an underlayment where prevention of water penetration is required including under metal roofs*. TW Underlayment also provides secondary protection against water penetration after installation of the roof system. When fasteners penetrate the TW Underlayment membrane during installation of a metal roof system, the metal roof system manufacturer's recommendations should be followed to assure watertight integrity at the fastener penetrations. *Before installing TW Underlayment under copper roofing, a design professional must be consulted to analyze the interaction of the building, roof deck, and roof assembly with regards to adequate temperature resistance.

**FOAMULAR® 250 Rigid Foam Insulation:**

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration.

FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity means it can be scored and snapped, cut, or sawed with common tools.

Sagging and settling are never a problem.

Moisture Resistance: 0.1% water absorption by volume for long-lasting performance.

Compressive Strength: Maintains top function and integrity.

Versatility: Engineered for a variety of sidewall, below-grade and roofing applications.

Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam.

Easy Installation: Saves time and money since it is fast and efficient to install.

INSTALLATION OF INSULATION (OPTIONAL)

Butt all insulation boards together, staggering the joints. All spaces larger than one-quarter inch (1/4") must be filled to provide a uniform smooth surface.

Screws and deck plates shall be applied at the minimum rate of eight (8) per 4' x 8' sheet of insulation, and five (5) per 4' x 4' sheet, or as required by the insulation manufacturer. When installing insulation around the perimeter, the fastening pattern is one (1) deck plate and one (1) screw every two (2) square feet or sixteen (16) per 4' x 8' sheet in a diamond in the box pattern, and eight (8) per 4' x 4' sheet.

Extra fasteners should be installed around protrusions such as pipes, chimneys, skylights, and irregularities in the roof deck.

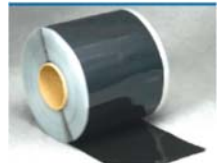

Do not lay more insulation than can be covered with the WeatherBond EPDM membrane by the end of the working day.

EcoFill Wx blowing wool insulation is an unbonded, virgin fibrous glass blowing insulation having a high degree of post-consumer recycled content, designed for weatherizing and retrofitting existing housing.

EcoFill Wx blowing wool insulation is used to dense-pack sidewalls using the drill and fill technique common in retrofitting homes or in home weatherization activities. EcoFill Wx blowing wool insulation is also excellent for doing open blows in attics. This means that only one product is needed to complete an insulation retrofit/weatherization project.

Coverage and installation data were determined using a Volu-Matic® II blowing machine in 3rd gear with a 13" gate opening, 2.0 psi air pressure and 150' of 3" diameter internally-corrugated hose.

*"R" means resistance to heat flow. The higher the R-value, the greater the insulating power. To get the marked R-value it is essential that this insulation be installed properly. If you do it yourself, get instructions and follow them carefully. Instructions do not come with this package.

**Based on a Third Party 2-year settling study, the predicted settlement over a 20-year period would be 1 percent or less. This amount of settling is thermally insignificant. Therefore, the installed and settled thickness is effectively the same.

Exceptional Outdoor Living for Every Taste and Budget

Have more time to do what you love on a Fiberon composite deck. A high-performance, eco-friendly wood alternative, Fiberon decking offers the warmth and appeal of natural hardwoods without all the time and expense of maintenance.

Choose from a wide range of colors and finishes to suit your style and budget.

**HORIZON SYMMETRY COLLECTION**

Symmetry Decking offers the most natural look, feel, and color palette available today in luxury composite decking, all balanced with time-tested durability and performance.

The low-gloss formulation and unique micro-texturing process create a beautiful matte finish. Multi-tonal streaking echoes elegant hardwoods. And the colors? Inspired by natural elements and pigments, the palette is subdued yet striking.

Equally impressive is the uncompromising performance and easy maintenance. Our four-sided PermaTech cap layer resists fading and staining, while the durable composite core means no splintering, cracking, insect infestation, or decay.

HORIZON

From its dramatic color tones and multiple wood grain patterns to the polish and protection of capping on all four sides, Fiberon Horizon® Decking is the composite deck board for those who won't compromise. Horizon is capped (or covered) on all four sides with PermaTech® surface material and never needs sanding, staining, or sealing. Four-sided capping increases durability, enhances stain and fade resistance, and ensures a polished appearance all around. Plus, Horizon boards feature two different wood grain patterns on the top and bottom for more design options and less material waste. All this, and at a price that is comparable to others' non-reversible boards.

There's no organic content to promote mold growth, but there is exceptional resistance to moisture, dents and flames. Paramount PVC Decking meets the requirements of the CA SFM 12-7A-4, Part A and Part B, Class B Burning Brand,

for use in all Wildland Urban Interface (WUI) zones. Wood decks simply can't compare.

FANFOLD UNDERLAYMENT BOARD					
SIDING UNDERLAYMENT					
GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene capsheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

The real beauty of wood comes from the true natural qualities of wood itself. Wood will vary in color from shades of white, red, brown and green to almost black. Grain variations of solid hardwood and veneers will vary slightly from wild to nearly straight in appearance. Solid wood panels naturally expand and contract with normal humidity changes due to interior heating and cooling. These characteristics are what makes wood beautiful, and distinct in color. Countryside does not warrant or under any circumstances consider color, graining or minimal shrinkage a defect in material or workmanship.

Alder is a smooth hardwood with straight grain and an even texture. It's color can range from a light honey to a reddish-brown hue, similar to cherry. Alder will mellow in color (become a shade lighter) as it ages.

Rustic Alder has a fine, straight-grain pattern and even texture. The color is a light brown with a reddish tinge that stains evenly. Rustic Alder includes character spots, knots, burls and blemishes which do not affect the product durability. As one of the softest hardwoods, alder can be easily dented or scratched.

Cherry is a smooth, even-grained hardwood. It is characterized by its red undertones, but may vary in color from white to a deep, rich brown. Cherry has a fairly uniform texture, revealing pin knots and curly graining. Over time the finish will darken. This is a sought-after quality in cherry cabinetry, and those who select it expect this evolution.

Hickory is a strong, heavy hardwood known for its distinctive and random graining patterns. There is a wide variety in color and streaking, ranging from white to dark brown, that can appear in a single door panel. These exaggerated characteristics are to be expected and are considered desirable in hickory cabinetry.

Rustic Hickory is a strong, heavy hardwood known for distinctive graining patterns. Contributing to its dramatic appearance is a wide variety in color and streaking, ranging from white to dark brown. This contrast in color can appear in a single door panel. Hickory also contains random knots and wormholes that further contribute to a varied appearance. These exaggerated characteristics are to be expected and are considered desirable in hickory cabinetry.

Maple is a close-grained hardwood that is predominately white to creamy-white in color, with the occasional reddish-brown tones. Maple is characterized by its smooth, even grain pattern. Mineral streaks and tiny bird pecks are common and will appear darker when stained.

Oak is a very strong, open-grained hardwood that ranges in color from white to pink to reddish tones. Streaks of green, yellow and even black may appear due to mineral deposits. Oak is known for its prominent grain pattern and texture that varies from a tight, straight grain to a distinctive arched pattern.

Rustic Oak is a strong, open-grained hardwood that ranges in color from white to pink to reddish tones. Streaks of green, yellow and even black may appear due to mineral deposits. Oak may also contain wormholes and wild, varying grain patterns. This distinct graining is considered a desirable quality. Rustic Oak has many of the same characteristics as oak, but adds more color variations and knotholes.

What to expect when ordering Countryside's Rustic Woods:

- **Sound Closed Knot (not moveable)** - Expected in Countryside Rustic Woods up to approximately 3" diameter.
- **Sound Knot with Cracks** - Expect sound knots with open cracks up to approximately 1" in length.
- **Open Knot (Through door)** - Not to be expected in Countryside Rustic Woods.
- **Unsound Knot (moveable core)** - Not to be expected in Countryside Rustic Woods.
- **Knot Cluster (cluster of tight sound knots)** - To be expected in Countryside Rustic Woods.
- **Worm Holes/Pin Holes** - Can be expected in Countryside Rustic Woods.
- **Worm Tracks** - Can be expected in Countryside Rustic Woods in sizes up to approximately 1/8" wide by 8" long.

Please Note: Rustic characteristics will be on cabinet doors only. Accessories are not available in our rustic species; alder, hickory or oak will be substituted.

Stains, Paints & Finishing:

Stains:

Countryside stained products and accessories consist of complete water base stains applied on a state of the art flat line finish system. The stains are consistently applied with 2 reciprocating spray guns with fine tip heads. Qualified personnel then hand wipe the wood for an even application of the stain. This will highlight the grain patterns and beauty of the wood.

All of the stains are designed exclusively for Countryside Cabinets. These stains cover a wide spectrum of hues and tones. An in-house stain matching system is available to meet your needs for custom colors in a timely manner.

We finish the product using a force-dry oven system and completely cure the finish using ultra violet technology. This process offers a beautiful long lasting durable finish that is dry to the touch as it comes off of our line.
