# HERITAGE® SHINGLES: Algae Resistant

HERITAGE® shingles feature a double-layer fiberglass mat construction with a random-cut sawtooth design. The two layers of mat are coated with asphalt and then laminated together and surfaced with mineral granules. A self-sealing strip of asphalt helps provide wind resistance. Shadowtone granule blend adds extra richness and depth. Random-cut sawtooth design prevents unsightly zipper patterns. Extra-thick weather-resistant construction provides years of protection.

30 year limited warranty. U.L. Class A fire rated and U.L. wind related.

Heritage® America's Natural Colors® add a contemporary flair with dramatic and vibrant hues.

**Heritage<sup>®</sup> Woodgate<sup>™</sup>** are designed with a wider cut that conveys a rugged yet refined wood-shake look. Unique color blend complements the expansive look and allows for more dramatic color distribution across the shingle. Enhanced shadow line further intensifies the rustic shake-like beauty.

TAMKO® TW Underlayment

Is a flexible, self-adhering rubberized asphalt sheet membrane with a polymer film on the surface and a removable treated release film on the adhesive side. It is well suited for use as an underlayment where prevention of water penetration is required including under metal roofs\*. TW Underlayment also provides secondary protection against water penetration after installation of the roof system. When fasteners penetrate the TW Underlayment membrane during installation of a metal roof system, the metal roof system manufacturer's recommendations should be followed to assure watertight integrity at the fastener penetrations. \*Before installing TW Underlayment under copper roofing, a design professional must be consulted to analyze the interaction of the building, roof deck, and roof assembly with regards to adequate temperature resistance.

# FOAMULAR® 250 Rigid Foam Insulation:

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration.
 FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity means it can be scored and snapped, cut,or sawed with common tools.

Sagging and settling are never a problem.

Moisture Resistance: 0.1% water absorption by volume for long-lasting performance. Compressive Strength: Maintains top function and integrity.

Versatility: Engineered for a variety of sidewall, below-grade and roofing applications. Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam. Easy Installation: Saves time and money since it is fast and efficient to install.

EcoFill Wx blowing wool insulation is an unbonded, virgin fibrous glass blowing insulation having a high degree of post-consumer recycled content, designed for weatherizing and retrofitting existing housing. EcoFill Wx blowing wool insulation is used to dense-pack sidewalls using the drill and fill technique common in retrofitting homes or in home weatherization activities. EcoFill Wx blowing wool insulation is also excellent for doing open blows in attics. This means that only one product is needed to complete an insulation retrofit/weatherization project.

# FOAMULAR® 250 Rigid Foam Insulation:

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration.

FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity means it can be scored and snapped, cut or sawed with common tools. Sagging and settling are never a problem.

Moisture Resistance: 0.1% water absorption by volume for long-lasting performance. Compressive Strength: Maintains top function and integrity.

Versatility: Engineered for a variety of sidewall, below-grade and roofing applications. Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam. Easy Installation: Saves time and money since it is fast and efficient to install.

#### FANFOLD UNDERLAYMENT BOARD

#### SIDING UNDERLAYMENT

GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene capsheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

### WOOD SPECIES AND FINISHES

#### WOOD SPECIES

STAIN GRADE MAPLE Stain Grade maple is smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species.

PAINT GRADE MAPLE Paint Grade Maple is a smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species. This grade is specifically intended for a painted finish. Skins and panels may be made from engineered wood products.

#### FINISHES

#### STAINS

Cabinets receive a coat of non wiping stain, one coat of self sealing conversion varnish and a top coat of conversion varnish.

#### PAINTS - 8% UPCHARGE

On wood products, movement is typical due to changes in the climate conditions. This will cause the hairline cracks at the stiles, rails and joints that you will see in a painted finish. Panel shrinkage may also occur in the door panel of your cabinetry. Over time there may be a slight color change in this finish due to exposure to natural and artificial light. The color black also brings out the natural flaws in the wood that is hidden by other colors. These items listed above are natural occurrences in the wood and will not be considered a defect or reason for replacement by Koch Cabinets.

#### FINISHING PROCESS

- 1. Doors and drawer fronts are sanded through a wide belt sander followed by an orbital sander.
- 2. They are hand sanded and inspected.
- 3. Stain is applied to both sides.
- Doors and fronts have a coat of self sealing conversion varnish applied and are oven cured one side at a time.
- 5. They are hand seal sanded and brushed clean of sealer dust.
- 6. They have a top coat of conversion varnish applied and are oven cured one side at a time.
