LOW RIB – COMMERCIAL – RESIDENTIAL – STANDING SEAM Trims, Fasteners and Ag. Bldg. Accessories are available for all products. See Our On-Line Catalog for Pricing.

Badger is now stocking <u>PANEL-LOC PLUS™</u> in 14', 16' & 22' lengths in a limited number of colors. We also stock a number of the most popular trims and colors. (See the following pages.)

PANEL-LOC™ is a low rib (5/8") panel that is best used for post frame barns and buildings, as well as residential roofing. PANEL-LOC™ is available in 26 and 29 gauge steel.

PANEL-LOC PLUS™ is a low rib (3/4") panel which provides durable performance with an added striation on top of the rib that gives it even more strength. PANEL-LOC PLUS™ gives agricultural and light commercial projects, as well as residential roofs, the protection of steel with an attractive appearance.

HORIZON-LOC™ is a durable concealed fastener roof system with easy snap together installation. This architectural panel system uses minimal visible fasteners, giving your building a clean, attractive finish. The panel's easy snap-on ribs attach rapidly with no hand seaming, so installation is less expensive than traditional standing seam.

HERITAGE® SHINGLES: Algae Resistant

HERITAGE® shingles feature a double-layer fiberglass mat construction with a random-cut sawtooth design. The two layers of mat are coated with asphalt and then laminated together and surfaced with mineral granules. A self-sealing strip of asphalt helps provide wind resistance. Shadowtone granule blend adds extra richness and depth. Random-cut sawtooth design prevents unsightly zipper patterns. Extra-thick weather-resistant construction provides years of protection.

30 year limited warranty. U.L. Class A fire rated and U.L. wind related.

Classic Heritage® colors are time-honored favorites that create a traditional look.

TAMKO® TW Underlayment

Is a flexible, self-adhering rubberized asphalt sheet membrane with a polymer film on the surface and a removable treated release film on the adhesive side. It is well suited for use as an underlayment where prevention of water penetration is required including under metal roofs*. TW Underlayment also provides secondary protection against water penetration after installation of the roof system. When fasteners penetrate the TW Underlayment membrane during installation of a metal roof system, the metal roof system manufacturer's recommendations should be followed to assure watertight integrity at the fastener penetrations. *Before installing TW Underlayment under copper roofing, a design professional must be consulted to analyze the interaction of the building, roof deck, and roof assembly with regards to adequate temperature resistance.

EcoFill Wx blowing wool insulation is an unbonded, virgin fibrous glass blowing insulation having a high degree of post-consumer recycled content, designed for weatherizing and retrofitting existing housing. EcoFill Wx blowing wool insulation is used to dense-pack sidewalls using the drill and fill technique common in retrofitting homes or in home weatherization activities. EcoFill Wx blowing wool insulation is also excellent for doing open blows in attics. This means that only one product is needed to complete an insulation retrofit/weatherization project.

*"R" means resistance to heat flow. The higher the R-value, the greater the insulating power. To get the marked R-value it is essential that this insulation be installed properly. If you do it yourself, get instructions and follow them carefully. Instructions do not come with this pack-

**Based on a Third Party 2-year settling study, the predicted settlement over a 20-year period would be 1 percent or less. This amount of settling is thermally insignificant. Therefore, the installed and settled thickness is effectively the same.

HORIZON SYMMETRY COLLECTION

Symmetry Decking offers the most natural look, feel, and color palette available today in luxury composite decking, all balanced with time-tested durability and performance.

The low-gloss formulation and unique micro-texturing process create a beautiful matte finish. Multi-tonal streaking echoes elegant hardwoods. And the colors? Inspired by natural elements and pigments, the palette is subdued yet striking.

Equally impressive is the uncompromising performance and easy maintenance. Our four-sided PermaTech cap layer resists fading and staining, while the durable composite core means no splintering, cracking, insect infestation, or decay.

HORIZON

From its dramatic color tones and multiple wood grain patterns to the polish and protection of capping on all four sides, Fiberon Horizon® Decking is the composite deck board for those who won't compromise.

Horizon is capped (or covered) on all four sides with PermaTech® surface material and never needs sanding, staining, or sealing. Four-sided capping increases durability, enhances stain and fade resistance, and ensures a polished appearance all around. Plus, Horizon boards feature two different wood grain patterns on the top and bottom for more design options and less material waste. All this, and at a price that is comparable to others' non-reversible boards.

FANFOLD UNDERLAYMENT BOARD

SIDING UNDERLAYMENT

GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene capsheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

WOOD SPECIES AND FINISHES

WOOD SPECIES

STAIN GRADE MAPLE Stain Grade maple is smooth, even grained wood that may contain: narrow staves, sapwood,

heartwood, and all other natural characteristics commonly found within this species.

PAINT GRADE MAPLE Paint Grade Maple is a smooth, even grained wood that may contain: narrow staves,

sapwood, heartwood, and all other natural characteristics commonly found within this species.

This grade is specifically intended for a painted finish.

Skins and panels may be made from engineered wood products.

FINISHES

STAINS

Cabinets receive a coat of non wiping stain, one coat of self sealing conversion varnish and a top coat of conversion varnish.

PAINTS - 8% UPCHARGE

On wood products, movement is typical due to changes in the climate conditions. This will cause the hairline cracks at the stiles, rails and joints that you will see in a painted finish. Panel shrinkage may also occur in the door panel of your cabinetry. Over time there may be a slight color change in this finish due to exposure to natural and artificial light. The color black also brings out the natural flaws in the wood that is hidden by other colors. These items listed above are natural occurrences in the wood and will not be considered a defect or reason for replacement by Koch Cabinets.

FINISHING PROCESS

- 1. Doors and drawer fronts are sanded through a wide belt sander followed by an orbital sander.
- 2. They are hand sanded and inspected.
- 3. Stain is applied to both sides.
- Doors and fronts have a coat of self sealing conversion varnish applied and are oven cured one side at a time.
- 5. They are hand seal sanded and brushed clean of sealer dust.
- 6. They have a top coat of conversion varnish applied and are oven cured one side at a time.
