Shadowtone granule blend adds extra richness and depth. Random-cut sawtooth design prevents unsightly zipper patterns. Extra-thick weather-resistant construction provides years of protection.

30 year limited warranty. U.L. Class A fire rated and U.L. wind related.

Classic Heritage® colors are time-honored favorites that create a traditional look.

Heritage® America's Natural Colors® add a contemporary flair with dramatic and vibrant hues.

Heritage[®] Woodgate[™] are designed with a wider cut that conveys a rugged yet refined wood-shake look. Unique color blend complements the expansive look and allows for more dramatic color distribution across the shingle. Enhanced shadow line further intensifies the rustic shake-like beauty.

FOAMULAR® 250 Rigid Foam Insulation:

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration.
 FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity means it can be scored and snapped, cut,or sawed with common tools.

Sagging and settling are never a problem. Moisture Resistance: 0.1% water absorption by volume for long-lasting performance. Compressive Strength: Maintains top function and integrity. Versatility: Engineered for a variety of sidewall, below-grade and roofing applications. Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam. Easy Installation: Saves time and money since it is fast and efficient to install.

EcoFill Wx blowing wool insulation is an unbonded, virgin fibrous glass blowing insulation having a high degree of post-consumer recycled content, designed for weatherizing and retrofitting existing housing. EcoFill Wx blowing wool insulation is used to dense-pack sidewalls using the drill and fill technique common in retrofitting homes or in home weatherization activities. EcoFill Wx blowing wool insulation is also excellent for doing open blows in attics. This means that only one product is needed to complete an insulation retrofit/weatherization project.

Coverage and installation data were determined using a Volu-Matic® II blowing machine in 3rd gear with a 13" gate opening, 2.0 psi air pressure and 150' of 3" diameter internally-corrugated hose.

*"R" means resistance to heat flow. The higher the R-value, the greater the insulating power. To get the marked R-value it is essential that this insulation be installed properly. If you do it yourself, get instructions and follow them carefully. Instructions do not come with this package.

**Based on a Third Party 2-year settling study, the predicted settlement over a 20-year period would be 1 percent or less. This amount of settling is thermally insignificant. Therefore, the installed and settled thickness is effectively the same.

FOAMULAR® 250 Rigid Foam Insulation:

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration.

FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity means it can be scored and snapped, cut or sawed with common tools. Sagging and settling are never a problem.

Moisture Resistance: 0.1% water absorption by volume for long-lasting performance. Compressive Strength: Maintains top function and integrity.

Versatility: Engineered for a variety of sidewall, below-grade and roofing applications. Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam. Easy Installation: Saves time and money since it is fast and efficient to install.

ATLAS EnergyShield® CGF Continuous Wall Insulation

Atlas EnergyShield® CGF (formerly Rboard®) is composed of a closed cell polyisocyanurate (polyiso) foam core, faced with a non-reflective coated glass-mat facer on both sides. The blowing agent used to produce the polyiso foam core does not contain any CFCs, HCFCs or HFCs. EnergyShield® CGF has zero Ozone Depletion Potential (ODP) and negligible Global Warming Potential (GWP). Atlas EnergyShield® CGF combines high R-value, enhanced durability from two coated glass-mat facers, and water resistive attributes in a high performance rigid Wall insulation. EnergyShield® CGF is suitable for a variety of continuous insulation (CI) applications. Panel sizes are 4' by 8' or 4' by 9'. Panels can be supplied in nominal 16" and 24" widths for use masonry cavity wall applications. Custom sizes are also available.

FANFOLD UNDERLAYMENT BOARD

SIDING UNDERLAYMENT

GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene capsheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

WOOD SPECIES AND FINISHES

WOOD SPECIES

STAIN GRADE MAPLE Stain Grade maple is smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species.

PAINT GRADE MAPLE Paint Grade Maple is a smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species. This grade is specifically intended for a painted finish. Skins and panels may be made from engineered wood products.

FINISHES

STAINS

Cabinets receive a coat of non wiping stain, one coat of self sealing conversion varnish and a top coat of conversion varnish.

PAINTS - 8% UPCHARGE

On wood products, movement is typical due to changes in the climate conditions. This will cause the hairline cracks at the stiles, rails and joints that you will see in a painted finish. Panel shrinkage may also occur in the door panel of your cabinetry. Over time there may be a slight color change in this finish due to exposure to natural and artificial light. The color black also brings out the natural flaws in the wood that is hidden by other colors. These items listed above are natural occurrences in the wood and will not be considered a defect or reason for replacement by Koch Cabinets.

FINISHING PROCESS

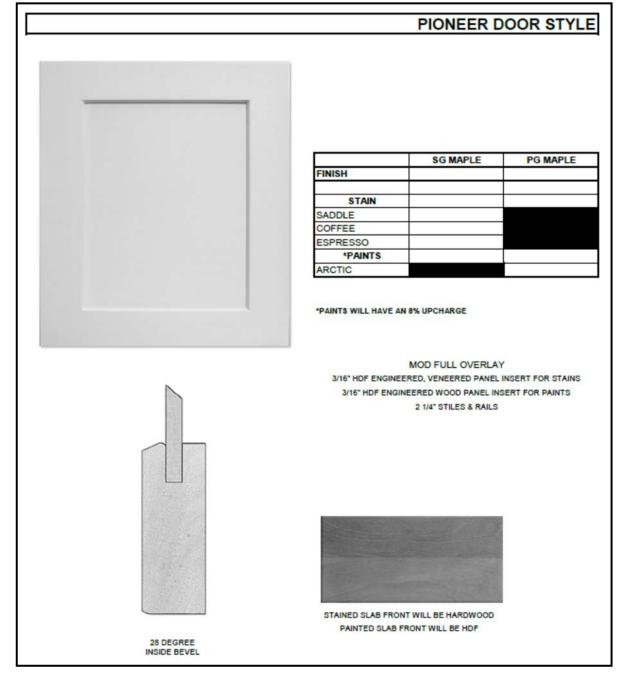

- 1. Doors and drawer fronts are sanded through a wide belt sander followed by an orbital sander.
- 2. They are hand sanded and inspected.
- 3. Stain is applied to both sides.
- Doors and fronts have a coat of self sealing conversion varnish applied and are oven cured one side at a time.
- 5. They are hand seal sanded and brushed clean of sealer dust.
- 6. They have a top coat of conversion varnish applied and are oven cured one side at a time.
