LOW RIB – COMMERCIAL – RESIDENTIAL – STANDING SEAM Trims, Fasteners and Ag. Bldg. Accessories are available for all products. See Our On-Line Catalog for Pricing.

Badger is now stocking <u>PANEL-LOC PLUS™</u> in 14', 16' & 22' lengths in a limited number of colors. We also stock a number of the most popular trims and colors. (See the following pages.)

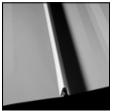

<u>PANEL-LOC</u>[™] is a low rib (5/8") panel that is best used for post frame barns and buildings, as well as residential roofing. PANEL-LOC[™] is available in 26 and 29 gauge steel.

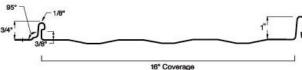

<u>PANEL-LOC PLUS</u> is a low rib (3/4") panel which provides durable performance with an added striation on top of the rib that gives it even more strength. PANEL-LOC PLUSTM gives agricultural and light commercial projects, as well as residential roofs, the protection of steel with an attractive appearance.

HORIZON-LOC[™] is a durable concealed fastener roof system with easy snap together installation. This architectural panel system uses minimal visible fasteners, giving your building a clean, attractive finish. The panel's easy snap-on ribs attach rapidly with no hand seaming, so installation is less expensive than traditional standing seam.

#### HERITAGE® SHINGLES: Algae Resistant

HERITAGE® shingles feature a double-layer fiberglass mat construction with a random-cut sawtooth design. The two layers of mat are coated with asphalt and then laminated together and surfaced with mineral granules. A self-sealing strip of asphalt helps provide wind resistance. Shadowtone granule blend adds extra richness and depth. Random-cut sawtooth design prevents unsightly zipper patterns. Extra-thick weather-resistant construction provides years of protection.

30 year limited warranty. U.L. Class A fire rated and U.L. wind related.

Heritage® America's Natural Colors® add a contemporary flair with dramatic and vibrant hues.

**Heritage[®] Woodgate[™]** are designed with a wider cut that conveys a rugged yet refined wood-shake look. Unique color blend complements the expansive look and allows for more dramatic color distribution across the shingle. Enhanced shadow line further intensifies the rustic shake-like beauty.

#### TAMKO® TW Underlayment

Is a flexible, self-adhering rubberized asphalt sheet membrane with a polymer film on the surface and a removable treated release film on the adhesive side. It is well suited for use as an underlayment where prevention of water penetration is required including under metal roofs*. TW Underlayment also provides secondary protection against water penetration after installation of the roof system. When fasteners penetrate the TW Underlayment membrane during installation of a metal roof system, the metal roof system manufacturer's recommendations should be followed to assure watertight integrity at the fastener penetrations. *Before installing TW Underlayment under copper roofing, a design professional must be consulted to analyze the interaction of the building, roof deck, and roof assembly with regards to adequate temperature resistance.

#### FOAMULAR® 250 Rigid Foam Insulation:

For exterior walls contains hundreds of millions of densely packed air cells to provide exceptional thermal performance. It's also virtually impervious to moisture, preventing loss of R-value due to moisture penetration. FOAMULAR® weighs considerably less than plywood, OSB or other non-insulation material so it's easier, faster and safer to install. Plus, the product's built-in rigidity

means it can be scored and snapped, cut,or sawed with common tools. Sagging and settling are never a problem.

Moisture Resistance: 0.1% water absorption by volume for long-lasting performance. Compressive Strength: Maintains top function and integrity. Versatility: Engineered for a variety of sidewall, below-grade and roofing applications.

Thermal Performance: Made from high-density, closed-cell extruded polystyrene foam. Easy Installation: Saves time and money since it is fast and efficient to install.

# **INSTALLATION OF INSULATION (OPTIONAL)**

**Roofing that** 

Butt all insulation boards together, staggering the joints. All spaces larger than one-quarter inch (1/4") must be filled to provide a uniform smooth surface.

Screws and deck plates shall be applied at the minimum rate of eight (8) per 4' x 8' sheet of insulation, and five (5) per 4' x 4' sheet, or as required by the insulation manufacturer. When installing insulation around the perimeter, the fastening pattern is one (1) deck plate and one (1) screw every tow (2) square feet or sixteen (16) per 4' x 8' sheet in a diamond in the box pattern, and eight (8) per 4' x 4' sheet.

Extra fasteners should be installed around protrusions such as pipes, chimneys, skylights, and irregularities in the roof deck.

Do not lay more insulation than can be covered with the WeatherBond EPDM membrane by the end of the working day.

EcoFill Wx blowing wool insulation is an unbonded, virgin fibrous glass blowing insulation having a high degree of post-consumer recycled content, designed for weatherizing and retrofitting existing housing. EcoFill Wx blowing wool insulation is used to dense-pack sidewalls using the drill and fill technique common in retrofitting homes or in home weatherization activities. EcoFill Wx blowing wool insulation is also excellent for doing open blows in attics. This means that only one product is needed to complete an insulation retrofit/weatherization project.

Have more time to do what you love on a Fiberon composite deck. A high-performance, eco-friendly wood alternative, Fiberon decking offers the warmth and appeal of natural hardwoods without all the time and expense of maintenance. Choose from a wide range of colors and finishes to suit your style and budget.

#### HORIZON SYMMETRY COLLECTION

Symmetry Decking offers the most natural look, feel, and color palette available today in luxury composite decking, all balanced with time-tested durability and performance.

The low-gloss formulation and unique micro-texturing process create a beautiful matte finish. Multi-tonal streaking echoes elegant hardwoods. And the colors? Inspired by natural elements and pigments,

the palette is subdued yet striking.

Equally impressive is the uncompromising performance and easy maintenance. Our four-sided PermaTech cap layer resists fading and staining, while the durable composite core means no splintering, cracking, insect infestation, or decay.

#### HORIZON

From its dramatic color tones and multiple wood grain patterns to the polish and protection of capping on all four sides, Fiberon Horizon® Decking is the composite deck board for those who won't compromise. Horizon is capped (or covered) on all four sides with PermaTech® surface material and never needs sanding, staining, or sealing. Four-sided capping increases durability, enhances stain and fade resistance, and ensures a polished appearance all around. Plus, Horizon boards feature two different wood grain patterns on the top and bottom for more design options and less material waste. All this, and at a price that is comparable to others' non-reversible boards.

Starborn® Structural F23 screws are designed for heavy duty framing applications including decking, fencing, pergolas, landscape timbers, timber framing, and more. They are fully tested and code compliant alternatives to traditional lag screws and through-bolts, with no pre-drilling required. These versatile screws feature a low-profile flat head design that minimizes interference with connectors and finish materials, a unique Tri-Forge™ point for reduced driving torque, and a high-adhesion exterior grade coating. The 4" and 5" lengths are specifically designed for code compliant deck Ledger attachments.

#### FANFOLD UNDERLAYMENT BOARD

#### SIDING UNDERLAYMENT

GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene capsheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

### WOOD SPECIES AND FINISHES

#### WOOD SPECIES

STAIN GRADE MAPLE Stain Grade maple is smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species.

PAINT GRADE MAPLE Paint Grade Maple is a smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural characteristics commonly found within this species. This grade is specifically intended for a painted finish. Skins and panels may be made from engineered wood products.

#### FINISHES

#### STAINS

Cabinets receive a coat of non wiping stain, one coat of self sealing conversion varnish and a top coat of conversion varnish.

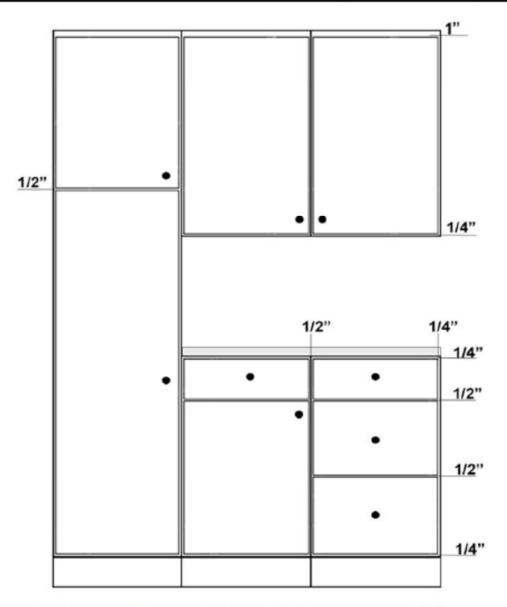

#### PAINTS - 8% UPCHARGE

On wood products, movement is typical due to changes in the climate conditions. This will cause the hairline cracks at the stiles, rails and joints that you will see in a painted finish. Panel shrinkage may also occur in the door panel of your cabinetry. Over time there may be a slight color change in this finish due to exposure to natural and artificial light. The color black also brings out the natural flaws in the wood that is hidden by other colors. These items listed above are natural occurrences in the wood and will not be considered a defect or reason for replacement by Koch Cabinets.

#### FINISHING PROCESS

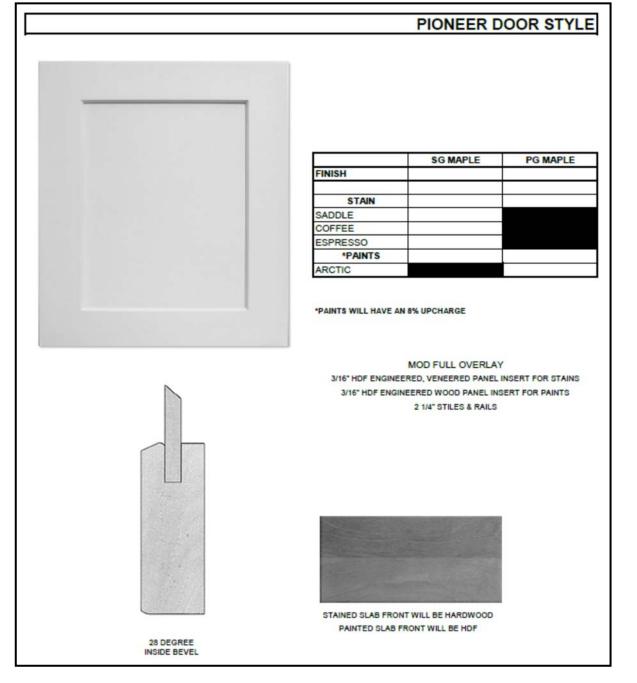

- 1. Doors and drawer fronts are sanded through a wide belt sander followed by an orbital sander.
- 2. They are hand sanded and inspected.
- 3. Stain is applied to both sides.
- Doors and fronts have a coat of self sealing conversion varnish applied and are oven cured one side at a time.
- 5. They are hand seal sanded and brushed clean of sealer dust.
- 6. They have a top coat of conversion varnish applied and are oven cured one side at a time.
