ROOFING UNDERLAYMENTS

Priced Per Roll

TAMKO® TW Underlayment

Is a flexible, self-adhering rubberized asphalt sheet membrane with a polymer film on the surface and a removable treated release film on the adhesive side. It is well suited for use as an underlayment where prevention of water penetration is required including under metal roofs*. TW Underlayment also provides secondary protection against water penetration after installation of the roof system. When fasteners penetrate the TW Underlayment membrane during installation of a metal roof system, the metal roof system manufacturer's recommendations should be followed to assure watertight integrity at the fastener penetrations. *Before installing TW Underlayment under copper roofing, a design professional must be consulted to analyze the interaction of the building, roof deck, and roof assembly with regards to adequate temperature resistance.

FANFOLD UNDERLAYMENT BOARD					
SIDING UNDERLAYMENT					
GreenGuard® Q-Series products consist of rigid, extruded polystyrene foam with tough polystyrene cap- sheets that are designed to withstand the rigors of jobsite handling. These products provide a smooth, level surface for new siding. The products are perforated to allow potentially harmful moisture vapor to escape so that it does not become trapped in the wall systems.

MAPLE WOOD SPECIES

Maple is a smooth, even grained wood that may contain: narrow staves, sapwood, heartwood, and all other natural **characteristics** commonly found within this species.

PAINT GRADE

Our Paint Grade is HDF, a high density fiberboard which is a composite material that is made from recycled wood fibers and resin. HDF is machine dried and pressed to produce dense sheets of material that stands up well to changes in heat and humidity. HDF is a smooth, even product that is specifically intended for a painted finish.

FINISHES

Cabinets receive a coat of non wiping stain, one coat of self sealing conversion varnish, and a top coat of conversion varnish.

PAINTS - 3% UPCHARGE

On wood products movement is typical due to changes in the climate conditions. This will cause the hairline cracks at the stiles, rails, and joints that you will see in a painted finish. Panel shrinkage may also occur in the door panel of your cabinetry. Over time there may be a slight color change in this finish due to exposure to natural and artificial light. These items listed above are natural occurrences in the wood and will not be considered a defect or reason for replacement by Koch Cabinets.

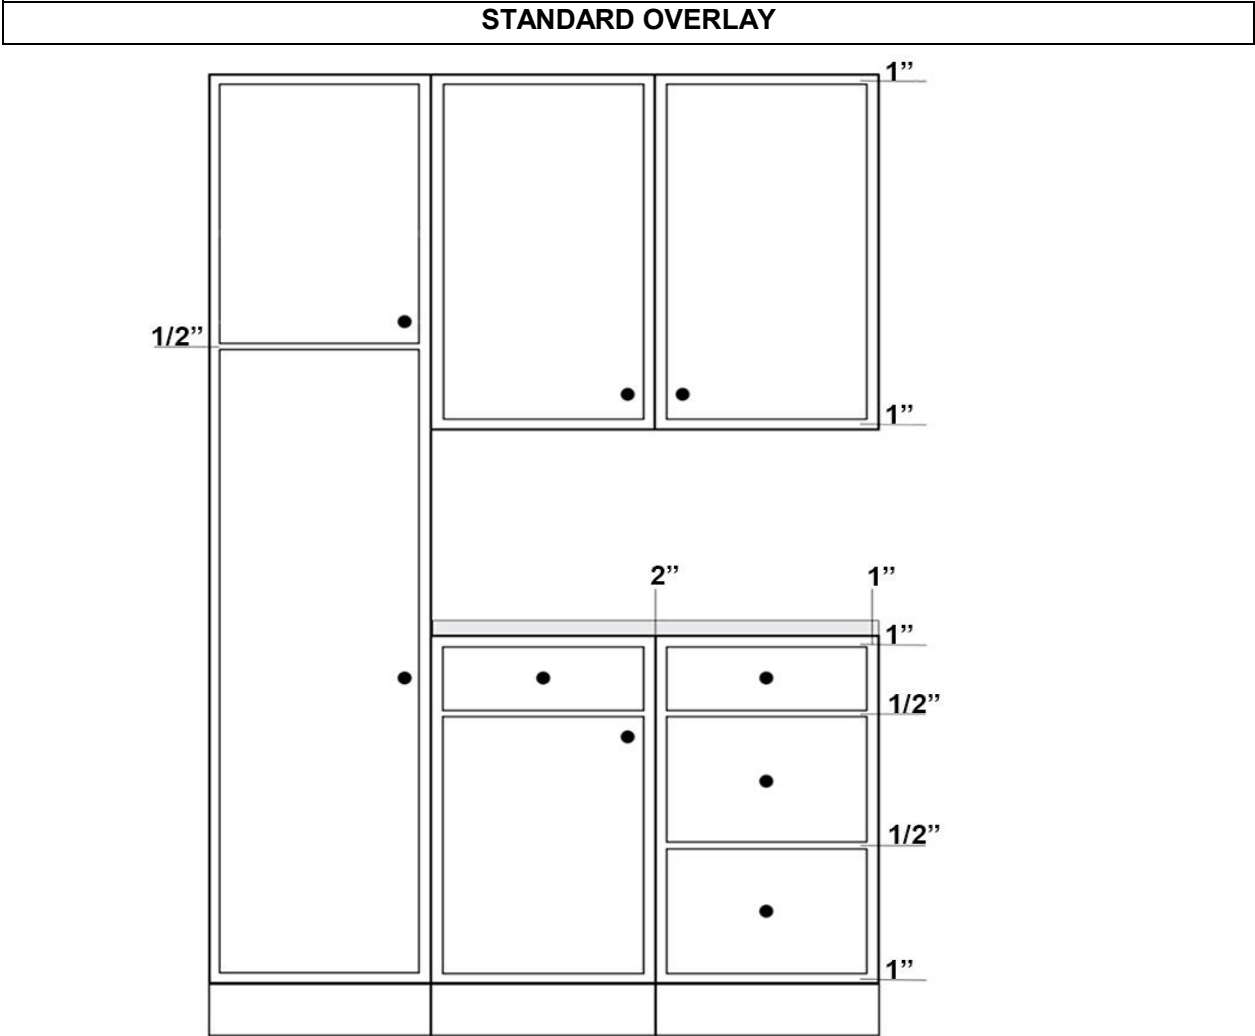

FINISHING

PROCESS

1. Doors and drawer fronts are sanded through a wide belt sander followed by an orbital sander.
2. They are hand sanded and inspected.
3. Stain is applied to both sides.
4. Doors and fronts have a coat of self sealing conversion varnish applied and are oven cured one side at a time.
5. They are hand seal sanded and brushed clean of sealer dust.
6. They have a top coat of conversion varnish applied and are oven cured one side at a time.
